## 4. Exercise: Sample space

Exercises due Feb 5, 2020 05:29 IST Completed

### Exercise: Sample space

0/2 points (graded)

For the experiment of flipping a coin, and for each one of the following choices, determine whether we have a legitimate sample space:

$\Omega = \{\text{Heads and it is raining, Heads and it is not raining, Tails}\}$

No

✗ Answer: Yes

$\Omega = \{\text{Heads and it is raining, Tails and it is not raining, Tails}\}$

Yes

✗ Answer: No

#### Solution:

In the first case, the elements of  $\Omega$  are mutually exclusive and collectively exhaustive, and therefore  $\Omega$  is a legitimate sample space.

For the second case, if the outcome is "Tails and it is not raining," then the outcome "Tails" will have also occurred. Therefore the elements of  $\Omega$  are not mutually exclusive, and  $\Omega$  is not a legitimate sample space.
